

Step 1: Login to AWS

Open:

[AWS Console](#)

Login using your AWS account.

Step 2: Open EC2 Service

In AWS search bar type:

EC2

Click:

EC2

Step 3: Launch EC2 Instance

Click:

Launch Instance

Step 4: Configure EC2 Instance

4.1 Name

Enter:

EcommerceWebsite

4.2 Select Ubuntu Image

Choose:

Ubuntu Server 24.04 LTS

(Free Tier Eligible)

4.3 Choose Instance Type

Select:

t2.micro

(Free Tier Eligible)

4.4 Create Key Pair

Click:

Create new key pair

Enter:

ecommerce-key

Choose:

- Type = RSA
- Format = .pem

Click:

Create key pair

.pem file will download automatically.

4.5 Configure Network Settings

Click:

Edit

Enable:

Allow SSH traffic
Allow HTTP traffic

Step 5: Launch Instance

Click:

Launch Instance

Wait until instance state becomes:

Running

Step 6: Connect to EC2 Instance

6.1 Select Instance

Tick/select your instance.

Click:

Connect

6.2 Use EC2 Instance Connect

Choose tab:

EC2 Instance Connect

Click:

Connect

A browser terminal will open.

Step 7: Update Ubuntu Packages

Run:

sudo apt update

Wait for completion.

Step 8: Install Apache Web Server

Run:

sudo apt install apache2 -y

Wait for installation to complete.

Step 9: Start Apache Service

Run:

sudo systemctl start apache2

Step 10: Enable Apache Service

Run:

sudo systemctl enable apache2

Step 11: Verify Apache Installation

Go to EC2 Dashboard.

Copy:

Public IPv4 Address

Open browser:

http://PUBLIC_IP

You should see:

Apache2 Ubuntu Default Page

This confirms Apache server is working.

Step 12: Download Ecommerce Website Template

Open website:

[Free Website Templates](#)

Download any Ecommerce Website template ZIP file.

Example:

- Shopping website
- Fashion store
- Online store template

Extract ZIP file on your computer.

The extracted folder will contain:

- index.html
 - css folder
 - js folder
 - images folder
-

Step 13: Upload Website Files to EC2

Inside EC2 terminal run:

cd /var/www/html

Remove default Apache page:

sudo rm index.html

Step 14: Upload Ecommerce Website Files

Method Used in Practical Exam (Easy Method)

In EC2 Instance Connect terminal:

Click:

Upload file

Upload:

- index.html
- css folder
- js folder
- images folder
- all extracted template files

Upload all ecommerce website contents into:

/var/www/html

Step 15: Verify Uploaded Files

Run:

ls

You should see:

- index.html
 - css
 - js
 - images
-

Step 16: Open Ecommerce Website

Go to browser:

http://PUBLIC_IP

Example:

http://13.xx.xx.xx

Your Ecommerce Website will open successfully.

Common Mistakes (IMPORTANT)

- Not opening port 80 → Website won't load
 - Not deleting default index.html
 - Wrong folder copy
 - Instance stopped → site not accessible
-

Viva Questions You Might Get
